

anchoring a first adhesive coated anchoring structure to said first predetermined epidermal area;
coupling a marginal area of said first anchoring structure to a marginal area of a first elastic member;

coupling an oppositely disposed marginal area of said first elastic member to a first end of a bandage structure;

coupling a second end of said bandage structure to a marginal area of a second elastic member;

coupling an oppositely disposed marginal area of said second elastic member to a marginal area of a second adhesive coated anchoring structure;

anchoring said second adhesive coated anchoring structure to said second epidermal area, whereby said first and said second predetermined epidermal areas are moved relative to one another.

110. The method of claim 109 wherein said bandage structure includes at least one side having a medicinal material thereon.

111. The method of claim 110 wherein said medicinal material comprises zinc chromate.

112. The method of claim 110 wherein said medicinal material comprises zinc chromate impregnated in a hydrocolloid material.

113. The method of claim 110 wherein said medicinal material comprises an alginate.

114. The method of claim 113 wherein said alginate is selected from the group consisting of calcium alginate and sodium alginate.

REMARKS

The foregoing amendment represents addition of claims supported in the specification. No new matter has been added. The claims are directed to a method of positioning the epidermis, as seen in the figures.

Respectfully Submitted,
